

COVID-19 Facility Decontamination

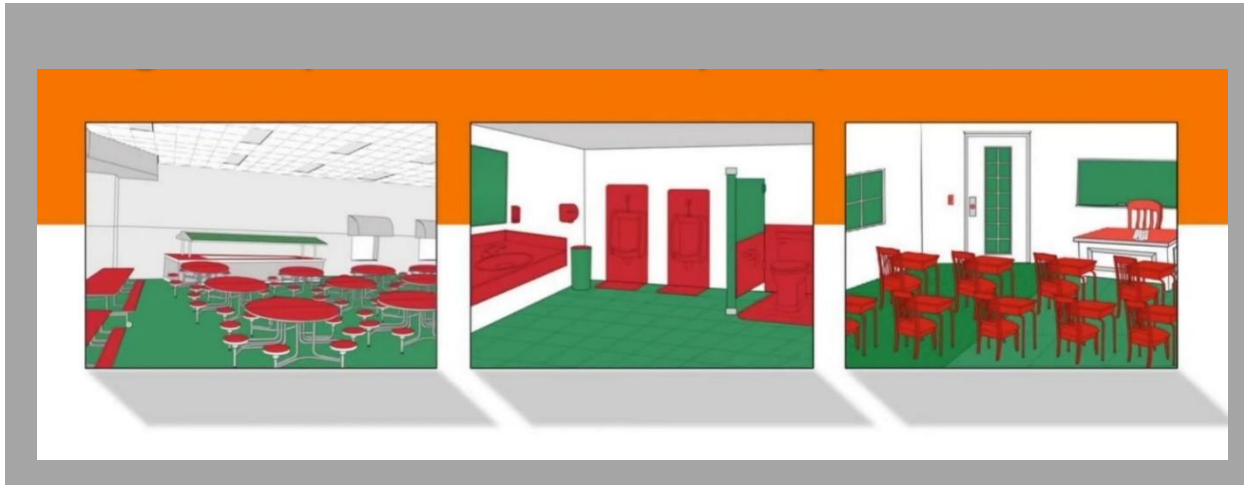

ERC Midwest's Coronavirus Decontamination Team is professionally trained, equipped and ready to provide you with Coronavirus (COVID-19) decontamination and disinfection services at your potentially virus-infected facilities. We provide comprehensive Coronavirus decontamination and disinfection during active sessions or temporary closures for cleaning in hospitals, nursing homes, assisted living apartments and common spaces, restaurants, high-schools, college residence halls, university lecture halls and auditoriums, locker rooms, office spaces including cubicles, desks, conference rooms, bathrooms, elevators, stairwells, and kitchen and dining areas.

Dealing with the evolving and heightened concerns around the Coronavirus pandemic can be an overwhelming challenge. Juggling & prioritizing your employees' health & managing expanded work-from-home teams, along with your production requirements and your customer's demands has become more than a full-time job.

We can help.

Using products that meet the EPA's criteria for use against SARS-CoV-2, the cause of COVID-19, our team will provide turnkey service to ease the minds of you and your staff in these unprecedented times. In just a few short hours, ERC Midwest can mobilize a team of professionals to your site, complete the Decontamination and Disinfection of your facility and then containerize and dispose of the waste.

ERC Midwest utilizes a two-step method for the decontamination and sanitization of your facility. Our team will first secure the facility (after hours and/or weekends are available), they will set up a decon area at the entry point of the facility. The team will don Level B personal protective equipment (PPE), enter the facility and hand-wipe clean the "high-touch or traffic area" (shown in red on the following page) to remove any organic build up. The removal of organic material will allow our disinfectant solution to penetrate down for effective sanitization.

In the second step, our Team applies a disinfectant solution utilizing an Electrostatic Fogger. This method involves applying an electric charge to the disinfectant to permit it to wrap around and evenly coat all types of surfaces, resulting in a more effective and complete coverage [SDS and SOP available upon request]. The EPA-approved disinfectant solution will penetrate and kill the Enveloped Virus COVID-19. All waste generated (PPE, wipe rags, solution) will be containerized on site, and disposed at a Waste-to-Energy Facility.
